FOR IMMEDIATE RELEASE  
17 October 2007

Qconnectis plc

Thames Water adopts Leakfrog and places first volume order

Qconnectis plc, ("Qconnectis" or "the Company"), the energy and water conservation and services provider, announces that, following successful field trials of its new "Leakfrog" product for water leakage monitoring, an order worth £198,000 has been placed by Thames Water.

The formal launch of Leakfrog will take place in early November.

The board of Qconnectis feels that this represents a major milestone in the progress and future growth of the Company.

Editors' notes - About Qconnectis

Qconnectis' patented technologies enable the analysis of remote meter data to facilitate water leakage control, customer profiling, and energy and water management efficiency. Its products are already being used by a wide range of UK and overseas utilities as well as large commercial and domestic users of energy or water.

The iStaq family of products work by sending meter readings to Qconnectis' secure data centre via SMS text messaging over the GSM network. The data is then aggregated and published online via utility-branded "myMeter" websites operated by Qconnectis. The data can also be sent directly to utilities' billings systems. Customers can access real-time information via a web browser using the "myMeter" service.
